

Covering every stage: **PRESS. POSTPRESS. PACK.**

## Over 40 years' experience in the printing industry.

There is one key business decision that made SCHOLPP the company it is today. The idea was very simple in essence: if we already have a machine on a crane hook, why not bring it straight onto the factory floor?

### Get going. Lift. Rotate.

When we developed and built our first hydraulic lifting gantry back in the 1970s, SCHOLPP laid the foundations for the future of industrial installation. It was an innovation that companies all over Europe were looking for.

It was now possible to lift heavy components in one piece without having to first spend considerable time dismantling them into individual parts. Our first large orders came from the printing press industry and publishing sector.

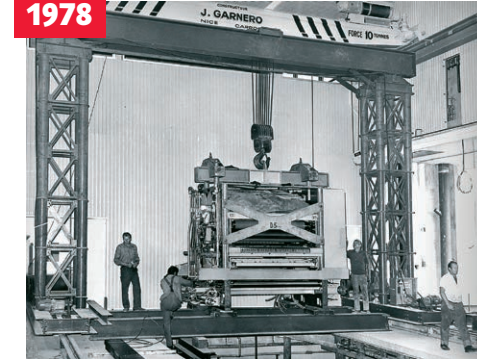

### Constant change? We've got it covered.

Innovations in technology and media have always driven changes in the market – and at an ever-increasing pace. Over the past four decades, we have been constantly looking for new technical solutions to further develop our lifting gantries and cable hoists.

Today Industry 4.0 means digitalization and integration. It also means competition in the printing and packaging market is growing all the time: differentiation and specialization are increasing cost and time pressures. New problems are constantly arising and call for new solutions. SCHOLPP helps its customers modernize their printing and packaging lines and increase the flexibility of their operations.

**Assembly. Relocation. Modernization.**  
**With you at every stage.**

**SCHOLPP Group**

**SCHOLPP is at hand  
wherever you need us to be.**

The SCHOLPP Group is the leading provider of global relocation and installation services for industrial systems. Our 1,000+ employees complete around 20,000 installations each year – in 50 countries and counting. At SCHOLPP we have our own pool of lifting equipment, currently valued at over 20 million euros. Our specialists are based across 21 sites: 16 in Germany and 5 in major international economic centers. So SCHOLPP can get to where you need us to be, fast.

### SCHOLPP Services

**We deliver what you need,  
in any size or shape.**

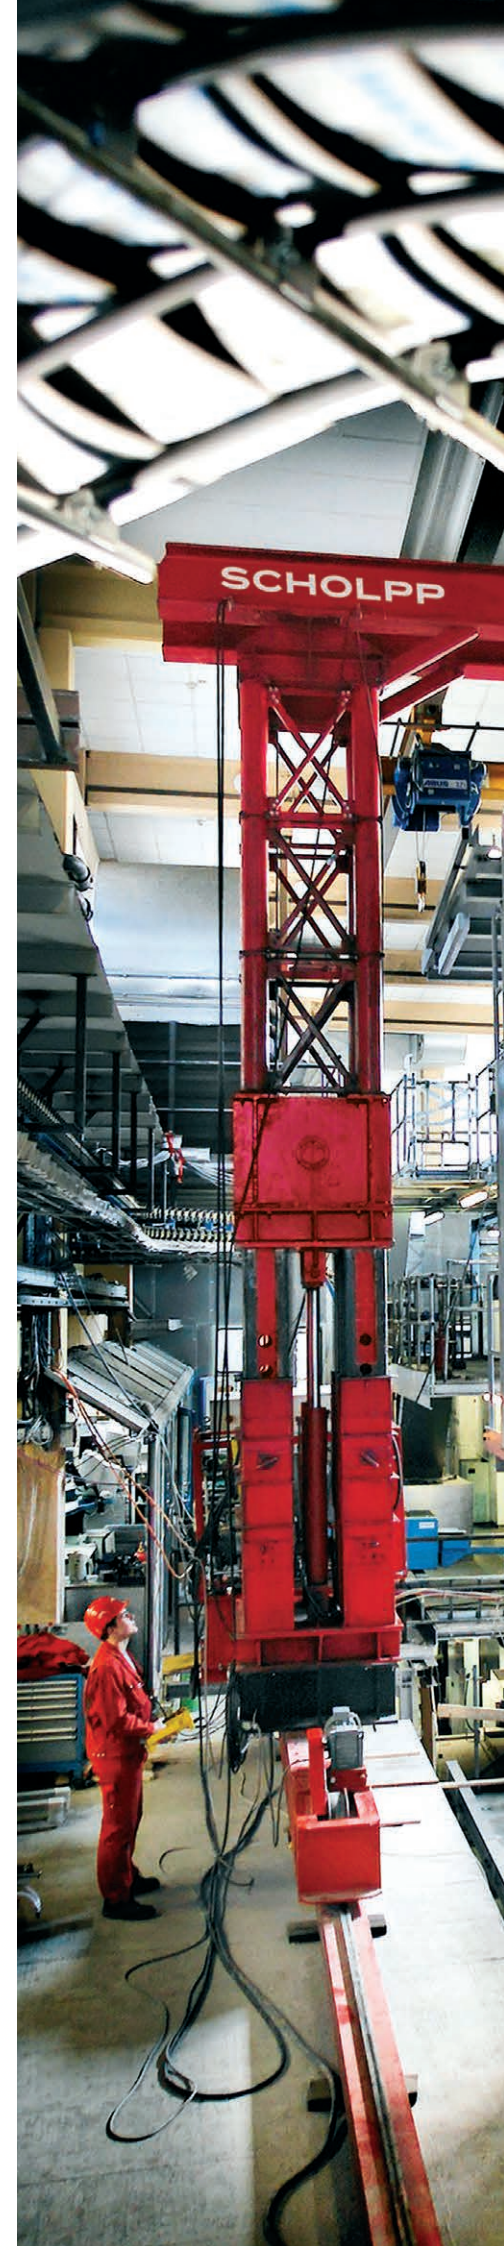

As a leading provider of installation and relocation services for machinery and production equipment, we can always find a solution that's a perfect fit, whatever the scale of your project. Because here at SCHOLPP, our maxim is: effectiveness and cost-effectiveness. You get the best of both worlds: the benefits of our excellent service and expertise combined with the most cost-effective use of personnel and technical resources. We bring in only the number of fitters and the equipment that the job demands.

You can pick and choose precisely the services you need from our service modules. They cover the full spectrum of relocation and installation services and beyond. From dismantling, transportation and installation right through to recommissioning: SCHOLPP can provide one-off specialist services, or act as a general contractor with overall responsibility for a large-scale project.

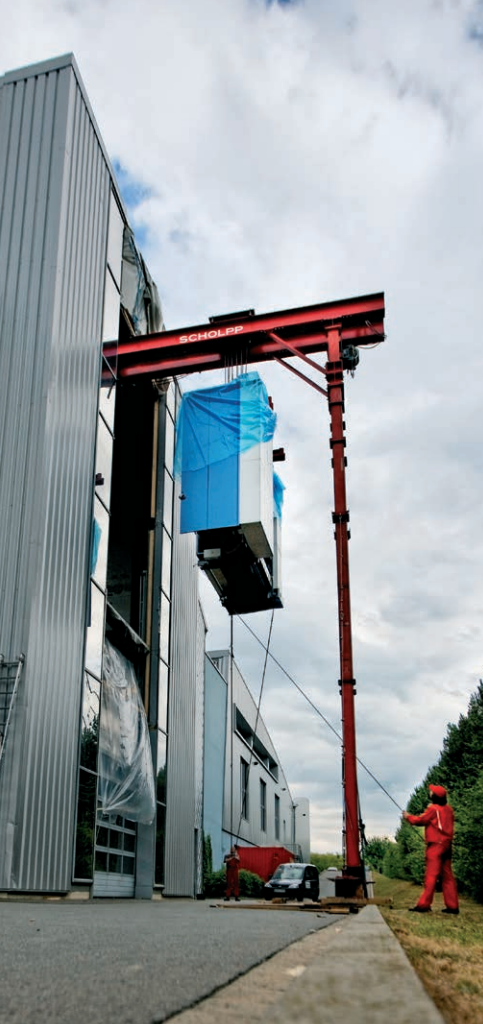

**High-precision services, every time.**  
**We give you everything  
in black and white.**

## Technical solutions: Installation gantries made by SCHOLPP

# We work well under pressure.

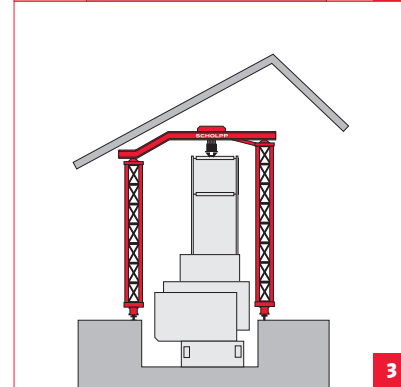

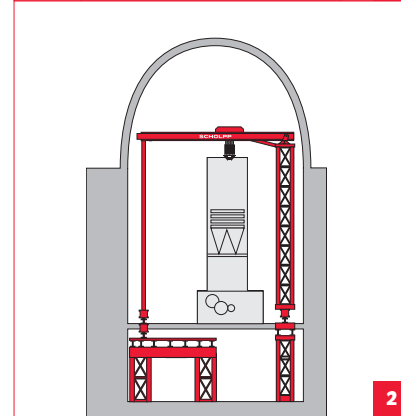

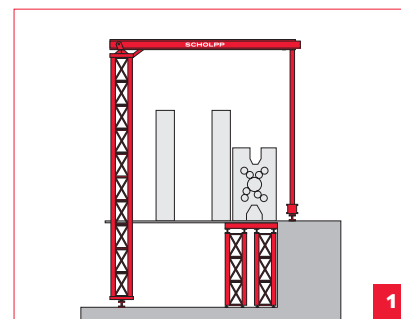

Our pool of high-tech equipment is unmatched in Europe in terms of both its technical specifications and its scope. We use the best available technology for every project: hydraulic lifting gantries, specialist cranes, forklifts, installation equipment and transportation vehicles. Many of these were developed by our engineers themselves.

We also have one key technology that no one else in the installation industry has: the SCHOLPP specialist lifting gantries in a wide variety of sizes, types and versions. Over the decades, our mechanical cable lifting gantry has proved to be the best solution for projects in the printing industry. And we continue to adapt it as the demands of the sector dictate.

Its modular design gives it great flexibility, enabling us to come up with installation solutions that are perfectly tailored to the project in hand, the machinery being installed and the space at the new location. Hydraulic extendable tower elements and infinitely variable drive technology in all three lifting and transportation axes (x/y/z) ensure that each machine is positioned in exactly the right place.

We combine our heavy equipment with a range of air cushion technologies, measurement instruments, laser technology and transport detectors. With SCHOLPP, you can lift and turn anything, any way you want: our installation teams have the right tools for every machine type and every task.

**Really want to build up pressure?  
We can help.**

*We have the right  
equipment for every job –  
and we can provide it at short notice  
in exceptional circumstances.*

## An expert partner in changing times

# Your installation partner for printing press machines and packaging systems.

The printing and packaging sector is constantly moving forward. In order to keep up with this dynamic market, manufacturers and operators are specializing and increasing the flexibility of their plant. In the age of Industry 4.0, the ability to adapt to these constant changes in requirements is essential. Technical retrofits, modernization and relocation work are now the order of the day.

SCHOLPP is more than just a service provider that assists during this change process. We actively support it. We have developed a huge number of specialist solutions and unique expertise in the relocation and complete installation of

new systems and existing machinery. With 40 years' experience in the sector, machine-specific assembly skills and a cost-efficient approach, we can put together attractive service packages that combine reliability, speed and precision.

## SCHOLPP moves it all: PRESS. POST PRESS. PACK.

All of the leading OEMs and equipment providers in the printing and packaging industry put their trust in our installation expertise. The same goes for many well-known operators of printing press machines and packaging equipment. SCHOLPP's range of services covers the entire spectrum of machinery within the sector:

### PRESS:

Job printing, sheetfed offset printing, digital printing, label printing, web-fed printing, gravure printing, security printing, newspaper printing

### POSTPRESS:

Post-processing machines, including folding, gluing, cutting, die-cutting and refining machinery

### PACK:

Blown film, flat film, flexo printing, spun-bonded fabric, gravure packaging printing

## Services: Complete installation of new machines

# Looking for a partner for a critical project?

One of SCHOLPP's specialties is installing new machinery. Each project poses new challenges, and every machine type requires different specialist knowledge. So we work with manufacturers and operators of printing and processing systems to develop custom solutions tailored to their needs.

SCHOLPP works as a service provider for the manufacturer, on behalf of the operator. We work for you, and we know the value of the trust you place in us. Your expertise in construction and technology is safe in our hands. Our project managers start by visiting you on-site and analyzing the work to be done. We use this information to draw up an instal-

lation plan, with specific time frames for each step. The key factor here is coordinating our staff and specialist equipment. Any unusual features at the destination are factored in. Our technicians use transportation rollers, lifting gantries or specialist cranes to install the machinery in its location and position it with millimeter precision. Once the basic mechanical installation work is complete, they carry out the fine adjustments and connect the electrics, hydraulics and pipework.

**We're happy to take the heavy lifting.  
In any printing factory.**

## SCHOLPP installs new machinery for OEMs, printers and publishers

- Setting up new machinery
- Complete installation
- Mechanical installation
- Electrical installation
- Commissioning and commissioning support
- Servicing
- Repairs

## Services: Modernizing and relocating existing machinery

# A lifelong partnership.

## SCHOLPP relocates and modernizes existing machinery

- Consultation and planning
- Dismantling and packing
- Transport logistics and interim storage
- Technical cleaning with dry ice
- Servicing and modernization
- Modification and dismantling

Printing systems and processing equipment are very easy to modify, even if their heavyweight structures do not give this impression at first glance. This ability to adapt to changing market conditions, technical advances and evolutions in production methods means they can have very long service lives. For operators of these systems, this makes both economic and environmental sense: change is no longer the exception, it is the rule.

SCHOLPP is your lifelong partner for your printing and packaging systems, from initial installation through modernization to eventual dismantling. Whether you want to move individual machines to

a new location or relocate your entire business, whether you have a retrofitting project, or you want to dismantle your entire line or just a section of it, or if you are selling or recycling your systems, SCHOLPP has a wealth of experience and unrivaled expertise in the sector.

**Changes in the market?  
We change with them.  
On schedule, to millimeter precision.  
Professionally. Safely.**
